## Sales Bulletin

### Series V11 Product Line Change

To: All Burnham Commercial Cast Iron Representatives and Wholesalers

From: Bill Bloom  
Burnham Commercial  
National Sales Manager

Subject: Transition from Series V11 to Series V11H

Date: November 21, 2012

As you are all aware the Department of Energy mandated new efficiency standards that affected many industry products. During the summer we completed our Series 8H to 8HE upgrade.

We have now completed work on the Series V11 product line with excellent results. Over the course of the next 60 days Series V11 will be obsolete and replaced by a higher thermally efficient Series V11H. We will continue to offer all current boiler models 4 thru 23 sections. Fuel inputs remain the same but because of a higher efficiency rating, the V11H output ratings are slightly higher than the V11 and best of all, **pricing has not changed!**

The major differences are as follows:

- Thermal efficiencies have jumped ~2% in both water and steam versions.
- All V11H models will include flueway baffles that are easily inserted between sections after the block is assembled.
- New Brochures
- New I&O manuals

Because we are depleting old V11 inventory, check with customer service when preparing to place your next V11 order. You will be told if that particular model has been transitioned to the V11H series. Orders can then be placed accordingly.

Enclosed with this letter is our new Series V11H brochure. This brochure is in stock and may be ordered. V11 I&O manuals may also be ordered. Please contact Customer Service.

Call with questions, concerns and most of all send orders!
